ROW Mapping

The Right of Way Mapping and Monitoring (RWMM) application is an interactive web-based map index system designed to help find highway ROW information. GIS gives a visual and analytical link to assessors' data and multiple listing services, to have precise property information. Map and monitor roads and highways to understand the exact location of utilities for construction or permitting.

      When to Use: 30% - 90%CR

      Whom: Core Constructability Team, Designers
